DETAILED ACTION

Receipt is acknowledged of a preliminary amendment, filed 12/31/2001, in which claims were amended (claims 4, 8-17, 19, 21-22) and in which claims were cancelled (claims 24-26). Claims 1-23 are pending in the instant application and are subject to the following restriction requirement.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-16 and 22-23, drawn to a process for producing a cell or particle comprising a membrane comprising a lipid-modified proteinaceous molecule, as well as to the cell or particle produced, classified in class 435, subclass 325.
- II. Claims 17-18, drawn to a nucleic acid vector encoding a lipid-modified proteinaceous molecule, classified in class 536, subclass 23.1.
- III. Claims 19-21, drawn to a lipid-modified proteinaceous molecule, classified in class 530, subclass 350.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group II and Group I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the nucleic acid vector of Group I can be used as a probe to identify genes encoding similar polypeptides.

Art Unit: 1636

Inventions of Group III and Group I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the lipid-modified proteinaceous molecule of Group III can be used to generate antisera against the particular lipid-modified proteinaceous molecule.

Inventions of Group II and Group III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation, different functions and different effects due to their different structural/functional characteristics (i.e. nucleic acids of Group II versus proteinaceous molecules of Group III).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1636

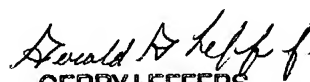

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
